

C/S ACROVYN PASSES THE TEST AT HARPFIELD PRIMARY SCHOOL

(PART OF STOKE SCHOOLS PFI)

Project Overview

The Stoke Schools PFI programme will span twenty-five years, resulting in nine new schools being built and refurbishment works being carried out on the rest of the schools estate in Stoke on Trent. Once these projects are completed the scheme will continue to run, providing maintenance and whole-life works on all the schools.

The Local Authority Architect's Department were involved at an early stage of the programme in setting standards for specifications for materials with a long maintenance period requirement.

One of the building components subjected to constant use, and thus taking a lot of knocks, are doors. The requirement for the door finishes to be robust and to retain their appearance was of high importance.

Aedas architects specified 2mm C/S Acrovyn Sheet to be applied to door faces throughout the school. The through colour Acrovyn Sheet is scratch resistant and easy to clean and maintain, protecting the door faces against potential damage and wear whilst remaining pleasing to the eye.

C/S Acrovyn faced doors were supplied to a number of Stoke Schools.

Architect:

Aedas, Manchester

Contractor:

Stoke Schools Joint Venture (SSJV) of Balfour Beatty Construction and Balfour Kilpatrick
