## Corner Guards

### SCG50 - SCG75 SCGV50

#### Installation Instructions

1. Lay out the work to be completed and spot check the materials for any damage that may have occurred during shipping and/or handling at the job site
2. Take measurements of the corner to be protected and, if necessary, cut the corner guard to length.
3. Prepare outside corner of wall for guard installation by removing any oil or dust.  
Clean any obvious dirty marks from the surface of the guard using a mild detergent and water.  
(\*See Note below about preparation of areas with wall coverings).
- 3a. \*N.B. If the area in which the guard is to be utilised has a vinyl wallcovering, it is recommended that a strip of wallcovering is removed, corresponding to the extent of the adhesive tape on the rear of the guard, to ensure good adhesion. A PVA primer can also be applied and allowed to dry to act as an adhesion promoter if required.
4. Remove the protective covering from the foam tape located on the rear of each leg of the corner guard.
5. Install the corner guard by aligning the bottom of the guard with the top of the skirting or finished floor. Carefully move the guard into position, keeping it vertical and ensuring the corner of the guard aligns with the corner of the wall.
6. When it is certain that the guard is in its correct position, complete the installation by pressing the guard onto the wall using steady firm hand pressure, to ensure maximum adhesion to the surface.
7. If the corner guard is to be fixed with C/S Construction Adhesive (available on request). Cut the nozzle to form a 6mm bead and apply the adhesive on both flanges to the rear of the corner guard in a continuous wavy bead.
8. Immediately press the corner guard firmly into position, removing any adhesive that is squeezed out before it cures.
9. Clean product of any obvious dirty marks using mild detergent and water.
